JULIAN MANAOIS

jmanaois704@gmail.com | (650) 303-8501 | San Francisco, CA

SUMMARY

IT professional with 4+ years of experience administering endpoint, network, and SaaS environments in education settings. Strong background in Jamf, Google Workspace, SIS/LMS integrations, automation, and documentation, with demonstrated success improving system reliability and support efficiency

EDUCATION

San Francisco State University — San Francisco, CA

Bachelor of Science, Computer Engineering — May 2023

WORK EXPERIENCE

IT Support Specialist | Hillbrook School

San Jose | Jul 2025 – Present

- Serves as the primary on-site administrator for campus technology, independently managing day-to-day operations for 250+ devices, network infrastructure, and AV systems across two school buildings.
- Created and updated macros and knowledgebase articles in Zendesk by documenting client issues and set up procedures, leading to a 35% reduction in support tickets and empowering clients with self-service tools for efficient resolution times.
- Led coordination with vendors to deploy servers and integrate software integrations into user environments.
- Partnered with external developers to develop a JavaScript grading tool integrated with the LMS, leading testing, validation, and daily deployment updates for a system used by all students and faculty.
- Delivered technical setup and support for mid- to large-scale meetings and events, including AV and conferencing systems.

IT Database & Support Specialist | The International School of San Francisco

San Francisco | Jun 2023 – Jun 2025

- Leveraged Jamf to deploy software and manage hardware across 200+ macOS devices, creating automated workflows for software updates, security protocols, inventory tracking, and network printer management, which improves device management efficiency and reduces device setup time by 50%.
- Resolved diverse IT matters by efficiently triaging and resolving help desk tickets
- Maintained Google Workspace and Active Directory by implementing role-based access, minimizing workflow disruptions for 200 users.
- Maintained and led configuration of Blackbaud SIS and Financial SaaS, including integrating and authenticating API, setting user access, and troubleshooting any application functions.
- Diagnosed and resolved network connectivity issues by systematically analyzing DNS records and network configurations, reducing issue resolution time to under 2 hours and enhancing network reliability for over 50 daily users.
- Leveraged SQL to generate tailored reports from the SIS, delivering actionable data insights to users, resulting in 25% increased project efficiency in multiple departments.

PROJECTS

Pokéllector — Jan 2023 - May 2023

- Independently developed an iOS application using Swift that integrates public database API to create wishlists and collections of Pokemon Trading cards
- Designed and implemented a responsive UI emphasizing smooth interactions and intuitive user workflows
- Developed a camera-based card scanning feature that identifies cards by matching captured images against a database

SKILLS

Mac & Windows OS, Google Workspace, Jamf, Claude Code, Codex, networks
